The field multiplies sketch entities – Linear field in two dimensions, circle field by the circle.

::: Lineární pole skici	⊙ Kruhové pole skici
If the future model is made by elements of linear or circle field, it is better to use commands of the same name in the choice of Command Manager/Elements because of economical using of computer memory, possibilities of changes copied elements and creates of configuration.

Dependence of entities

The sketch created by the **Circle field and** the **Linear field commands** contains not only **controlling** but **controlled** entities too . The system added **automatic linkages** between these two types of entities. It means – if you change the size of controlling (dimensioned) entity, size of all controlled entities will be changed.

Model symmetrical parts .
For simplification of your work copy entities by the circle field.
Slide the jaw 10mm, thickness of the washer is 5 and 10 mm.
